Geospatial Information Management course (CSCI-587). The focus of this course is on studying techniques to efficiently store, manipulate, index and query geospatial information in support of real-world geographical and decision-making applications. In this course, the students become familiar with a variety of geospatial applications (e.g., location-based services, online maps) and datasets (e.g., road-network data, aerial imagery, 3D models). Meanwhile, as part of the course projects, the students will learn to use the state-of-the-art geospatial software tools, applications and libraries such as those provided by Apple (e.g., iPhone), Oracle, Google (e.g., Android) and Microsoft.
